

The Fast Mapping Tool (FMT) by AKADEMIYA2063

is contributing to evidence-backed programmatic and policy interventions in support of Africa's development agenda by making data mapping more accessible to development practitioners across the continent.

HOW ARE WE DOING THIS?

Simplifying the data mapping process to a minimum of 8 clicks

Driving global, free & 24/7 accessibility via an open-access online platform

Ensuring confidentiality with no data storage

VALUE PROPOSITION

The Fast Mapping Tool (FMT) by AKADEMIYA2063 is a free online tool designed to generate thematic maps in a few clicks.

Come with your data, go with your map

Africa-centered, available for all 55 countries

Allows to map data at least at the second administrative level for each African country

User autonomy; FMT does not process nor store end-user data on its server

FAST MAPPING TOOL RATIONALE

ALIGNING WITH AFRICA'S DEVELOPMENT AGENDA

Africa's commitment to accelerating economic prosperity and improving the livelihoods of its populations is evidenced in several development frameworks, such as the Malabo Declaration for Accelerated Agricultural Growth, the Sustainable Development Goals (SDGs), the African Common Position, and Agenda 2063.

DATA-DRIVEN SOLUTIONS

To achieve these goals, the continent's decision-makers must rely on data-backed evidence to ascertain sustainable outcomes. Data mapping is an essential part of many data analysis processes, yet, data collection and processing tools are not always readily accessible to practitioners who lack the required technical training.

FACILITATING ACCESSIBILITY

The Fast Mapping Tool by AKADEMIYA2063 is an easy-to-use automated mapping tool responding to the preceding access issue. Designed to serve practitioners who may not possess technical data mapping capabilities, this Fast Mapping Tool allows for quality data mapping to facilitate data analysis for data-driven decision-making. The features of the tool facilitate data entry, visualization, exportation, and communication about the data and, by so doing, contribute to evidence-based programmatic and policy interventions across Africa.

TOP FEATURES

Effective tool for mapping sub-national & continental data for researchers, students, policy analysts, and civil society organizations.

Overcomes the barrier of the cost of mapping software that are generally expensive.

Responds to the mapping expertise gap in countries. Easy creation of thematic maps with just a few clicks, thus eliminating the learning curve of mapping software.
